EDUCATION

Chiang Mai University June 2022 - March 2026
Bachelor of Science in Statistics GPAX 3.41
Second Class Honors

- Major Statistics : Statistical Data Analysis, Statistical Software Skills, Experimental Design
- Minor Data Science : Data Analysis, Machine Learning, Data Visualization

SKILL

Language : English - Intermediate

Technical skill

- Programming & Query Languages: Python, SQL, R
- Data Analysis & Statistics: Statistical Modeling, Hypothesis Testing, Exploratory Data Analysis (EDA), SPSS, Jamovi
- Data Visualization & Business Intelligence: Power BI, Looker Studio
- Machine Learning & AI: Machine Learning, Deep Learning, Natural Language Processing (NLP), Retrieval-Augmented Generation (RAG)
- Machine Learning Frameworks & Libraries: Scikit-learn, PyTorch, TensorFlow, Keras
- Development Tools & Platforms: Git, GitHub, GitLab, Docker, VS Code, Jupyter Notebook, Google Colab
- High-Performance Computing: LANTA Supercomputer
- Other Technical Experience: LINE Messaging API, Arduino UNO Q, Arduino Modulino

EXPERIENCE

Super AI Engineer Season 6 — Developer Certificate May 2026 – Sep 2026

- Received a Developer Certificate from the Super AI Engineer program after completing AI training and practical activities covering artificial intelligence, machine learning, and real-world AI applications.

YimSiam Dot Com — AI engineer & System Analyst Intern July 2026 - Aug 2026

- Built the Moral Data Center (MDC) POC with data pipelines, AI agents, validation, analytics, and dashboards.
- Analyzed requirements and developed Kwunjai AI LINE chatbot workflows using the LINE Messaging API.

The Red Carbon — Data Analyst & Data Scientist Intern Apr 2025 – Nov 2025

- Contributed to Multi-Modal RAG, LLM-based Sentiment Analysis, interactive dashboards, and customer segmentation, including dataset preparation, chunking and metadata design, insight extraction, and customer labeling to support data-driven business analysis.

PROJECT

AIAT × OpenAI Codex Hackathon May 2026

- Built "Mitr," a Wi-Fi CSI-based AI prototype for privacy-preserving elderly wellness monitoring.
- Developed concepts for fall detection, activity tracking, and non-contact health sensing.

AWARD: **Honorable Mention Award**, AI Innovation Prototype Development for Healthcare and Wellness

Edge AI Solution Hackathon May 2026

- Developed and presented an Edge AI prototype solution focused on model deployment, system design, and real-world implementation feasibility.
- Learned business development concepts and presentation strategies for presenting AI solutions from both technical and business perspectives.

AWARD: First Runner-up, Edge-AI for Intelligent Transport System Hackathon

Collaborative Filtering Algorithms for Recommendation Systems Using Implicit Feedback Nov 2025

- Developed and compared various recommendation algorithms, including ALS, NMF, and Multi-VAE, using implicit feedbacks from supermarket transactions.
- Implemented matrix factorization and generative algorithms to decompose high-sparsity purchase history into latent features for product prediction.

AWARD: "**1st Place Winner**" Undergraduate Research and Cooperative Education Symposium

A Comparative Analysis of Machine Learning and Time Series Forecasting Models for Predicting Electricity Consumption in Large-Scale Businesses in Lamphun Province Mar 2025

- Applie Forecasting Methods Using Machine Learning and Time Series Techniques.
- Compared the Performance of Random Forest, LightGBM, SARIMA, and Holt-Winters' Models, with Random Forest.

AWARD: "Silver Award" 13th Graduate Conference in Applied Mathematics (UAMC2025), King Monghkut's Institute of Technology Ladkrabang.

Forecasting Frozen Durian Export Volumes Using Machine Learning Jan 2025

- Applied Forecasting Methods Using Machine Learning Techniques. This study compared several machine learning models, including XGBoost, Random Forest, LightGBM, and SVM, with XGBoost Achieving the Highest Performance

AWARD: Excellent Poster Presentation Award, 14th National Phayao Research, University of Phayao
